

NOTIFICATION OF EVENT OR UNUSUAL OCCURRENCE--PNO-TMI-84-12A

This preliminary notification constitutes EARLY notice of events of POSSIBLE safety or public interest significance. The information is as initially received without verification or evaluation and is basically all that is known by NRC staff on this date.

Facility: GPU Nuclear Corporation
Three Mile Island, Unit 2
Docket Number 50-320

Licensee Emergency Classification:
X Not Applicable

Subject: PLENUM JACKING - UPDATE

On December 11, 1984, the licensee completed jacking the reactor vessel upper plenum to 7 1/2 inches. Some slight increase in jacking load occurred near the end of the jacking. The licensee is evaluating this anomaly to determine the impact on plenum removal. The plenum is presently resting on mechanical followers and the hydraulic jacking equipment is being removed. A slight increase in radiation level was measured at one foot above the reactor vessel flange. No measurable increase in radiation occurred at the working level. There was no measurable release of Krypton 85. It is anticipated that the plenum will remain in this status until the spring of 1985 when the plenum can be removed from the vessel.

Media interest occurred because the licensee has issued a press release. The Commonwealth of Pennsylvania was informed.

This information is current as of 12:30 PM, December 12, 1984.

This preliminary notification is issued for information only and the NRC plans to continue monitoring events as they occur.
