Subject: WORKER INJURED IN REACTOR BUILDING

At 9:14 AM, December 16, 1986, a worker was injured in the reactor building containment when a temporary lead shield fell on him. The shielding, consisting of lead-filled curtains hung from a rack, is used to shield a contaminated stairway in the building. The worker was removed from the reactor building after being given first aid by the emergency response crew. The worker was transported to Hershey Medical Center by a company owned ambulance at 10:00 AM. Although the worker was slightly contaminated, he was decontaminated while en route to the Medical Center.

Site inspectors observed the response of the licensee to the event and will continue to follow this event.

This PN is for information only and is accurate as of 11:30 AM, December 16, 1986. The Commonwealth of Pennsylvania has been notified.
