 NRC/TMI-82-023

Docket 50-320

GPU Nuclear Corporation
 Mr. John J. Barton, Acting
 Director, TMI-2
 P.O. Box 480
 Middletown, PA 17057

Dear Mr. Barton:

Subject: Reserve Waste Water Tankage

In response to your April 8, 1982, letter on the above subject, the NRC staff concurs with your proposed plan to remove the Reactor Coolant Bleed Tanks (RCBT's) "A" and "C" from the required reserve waste water tankage.

As per Facility Operating License, paragraph 2.E (3), you are required to retain suitable tankage that could be used to store waste water from TMI-2 at an appropriate state of readiness. Currently the Containment Building sump inventory is less than 40,000 gallons, and there is sufficient reserve tankage in the Lower Tank Farm to store this if necessary. However, because of future decontamination operations within the containment building the amount of operating waste water is subject to change. Therefore, notify this office prior to any proposed operations (decontamination or otherwise) which could cause the containment waste water inventory to exceed 50,000 gallons.

The staff agrees that the removal of RCBT's "A" and "C" from the previously required waste water tank reserve is warranted to facilitate the timely cleanup of the Reactor Coolant System. Any further changes to specific tankage for waste water storage requires approval of the NRC staff in accordance with Section 2.E (3) of your Facility Operating License.
