TMI Program Office
Attn: Dr. B. J. Snyder
Program Director
US Nuclear Regulatory Commission
Washington, DC 20555

Dear Dr. Snyder:

Three Mile Island Nuclear Station, Unit 2 (TMI-2)
Operating License No. DPR-73
Docket No. 50-320
Removal of Reactor Vessel Head

At the present time we have no reason to anticipate that the reactor pressure vessel head will need to be put back on the vessel after it has been removed and put on the head stand.

As you know, the Technical Advisory and Assistance Group (TAAG) has reviewed the technical feasibility of reinstalling the head if any circumstances require such an action. They have determined that it is technically feasible to do so. GPU Nuclear has also determined the technical feasibility of reinstalling the head.

GPU Nuclear will reinstall the head on the pressure vessel if circumstances develop which indicate that action is appropriate.

Sincerely,

E. E. Kintner
Executive Vice President
